

WHAT IS CLAIMED IS:

1. A lamp shade device, comprising a housing, and a lining mounted in the housing, wherein:

the housing includes a shade body, a first support ring mounted on a first portion of the shade body, a second support ring mounted on a second portion of the shade body, a support frame mounted in the first support ring, and a plurality of support rods detachably mounted between the first support ring and the second support ring; and

the lining includes a lining body mounted in the shade body, a first ring mounted on a first portion of the lining body and rested on the first support ring of the housing, a second ring mounted on a second portion of the lining body and rested on the second support ring of the housing, and a plurality of support bars mounted on the first ring and rested on the support frame of the housing.

2. The lamp shade device in accordance with claim 1, wherein each of the first support ring and the second support ring is provided with a plurality of locking flanges, and each of the support rods has two ends each detachably mounted on a respective one of the locking flanges.

3. The lamp shade device in accordance with claim 2, wherein each of the locking flanges is formed with a locking groove, and each of the two ends of each of the support rods is detachably locked in the locking groove of a respective one of the locking flanges.

4. The lamp shade device in accordance with claim 2, wherein the locking flanges of the first support ring and the locking flanges of the second support ring are directed toward different directions.

5. The lamp shade device in accordance with claim 1, wherein the support frame of the housing is radially extended.

6. The lamp shade device in accordance with claim 1, wherein the lining body is made of a soft cloth.

7. The lamp shade device in accordance with claim 1, wherein the support bars of the lining are arranged in a radially manner.

10. The lamp shade device in accordance with claim 1, wherein the support bars of the lining are radially extended inward from the first ring.

9. The lamp shade device in accordance with claim 1, further comprising a plurality of fixing members mounted between the housing and the lining to combine the housing and the lining together.

15. The lamp shade device in accordance with claim 9, wherein each of the fixing members is mounted on the support frame of the housing, and each of the support bars of the lining is detachably inserted into a respective one of the fixing members and urged on the support frame of the housing, so that the first support ring of the housing and the first ring of the lining are combined together, and the housing and the lining are combined together.
